

Finance OneView

Enterprise financial data is commonly spread across multiple systems, making it almost impossible to gain a clear, 360 degree view of budgets, forecasts and actuals.

Finance OneView allows you to rapidly bring together data from your General Ledger, ERP and Budgeting and Forecasting systems. This enables a governed, analytical foundation to provide a complete view of financials.

- Central point of access for all enterprise finance data
- Full integration with General Ledger and transactional source systems
- Single point of capture for budgets and forecasts
- Drill-through capability from summary to individual transactional data via Power BI

Faster time to Insight

- Onboard data from your GL, spreadsheets and other sources in a matter of minutes
- Minimise manual processing time to create statutory reports
- Near real-time, self service analysis
- Automated Reconciliation across all systems

Bring together ALL your financial data

Single view of Financials

- Centralised repository of financial data
- Capture all budgets and forecasts across multiple departments and branches via a single interface
- Gain insight quickly, instead of waiting for days or weeks for reports to be produced.

Drill through from summary to transaction level data from single location

Seamlessly Integrate

- Seamlessly integrate with all of your transactional source systems
- Gain 360 view of your budgets, forecasts and actuals
- Drill through capability to individual budgets and supporting transactions.

Centralise financial information seamlessly

“The need to ensure data quality from multiple sources via a cleansing process is important, and leads on to the need to distribute this data for use across the enterprise seamlessly..”

- Gurkan Tasoren, Head of Bloomberg's Enterprise Solutions in Asia

Finance OneView provides a unified, analytics foundation to expedite your financial reporting.

Integrated view of Finance Data

- Automated data load from multiple systems
- A real-time centralised view of forecast and budget submissions across departments
- Central management of key business rules such as eliminations and allocations

Turnkey Finance Analytics

- Transparent workflow reporting for planning cycles
- What-if Analysis to support multiple scenarios
- Reconciliation Alerts
- Interactive Profit and Loss, Balance Sheet, Cash Flow Statements supporting drill down and drill through to detail
- KPI Scorecards for key management priorities

Our promise to you

Finance Oneview brings together all of your financial data into a single location, building an analytics foundation to meet all of your finance reporting requirements.

An offer to get you started
